Bite Stopper Halt & Heat Treatment

Stop the Bites Tonight!

Bite Stopper Halt & Heat Treatment is a combination of chemical and heat treatment that provides immediate relief. With proper cooperation, bed bugs will be eliminated. However, bed bugs are an introduced pest and can hitchhike their way back at any time.

A 30-day limited bed bug warranty begins the day after treatment. During the 30-day limited warranty period, if bed bugs are found to be present in the unit, Thrasher will provide localized bed bug treatment at no additional charge. For the limited warranty to remain in effect, the following provisions must be met by the Client:

1. No additional furniture or bedding (new or used) is brought into the unit.
2. No luggage either owned by the Client or guests may be brought into the unit.
3. No new occupants take up residence in the unit, including temporary guests.
4. If the unit shares walls with other units, then surrounding units must be inspected for bed bugs prior to the beginning of the limited warranty period. A fee will be charged for this service.
5. Client maintains the unit free from factors contributing to infestation included, but not limited to, factors listed in documentation provided by Thrasher Termite & Pest Control, Inc.

Your Preparation

- Remove heat-sensitive items, pets & plants
- Clean up clutter around baseboards
- Provide access to electricity
- Vacate the unit on the day of treatment
- Take only what you need. Do not bring luggage. Put clothes straight from the dryer into a new plastic bag or new, clear plastic tub.
- Talk to your neighbors. Bed bug inspection of adjacent units is a condition of the limited warranty.

Our Treatment

✓ Halt with Chemicals

One to two days prior to the heat treatment, we apply a chemical barrier to halt bed bugs from fleeing the heat.

✓ Kill with Heat

During Heat Treatment, one or more industrial heating devices are placed in the unit. The devices are activated until the temperature of all target areas is raised to 120° F / 50° C. Target areas may include the voids within walls and the stuffing at the center of a mattress or sofa.

Return Home

- Launder clothes that you removed from your residence during the treatment.
- Before returning anything to the residence, inspect all items for bed bugs and clean all items.
- Reinstall smoke and carbon monoxide detectors.

What to Expect

When will I see results from the treatment?
Immediately.

How long will the treatment last?

There are no lasting effects. All bed bugs are killed by our treatment; however, bed bugs are an introduced pest and may re-invade your residence at any time.

What if I see more bed bugs?

Call us immediately. Our 30-day limited warranty covers re-treatment as long as you have followed our instructions for keeping bed bugs out.

Are the pesticides harmful?

The EPA evaluates pesticides to ensure that they will not have unreasonable adverse effects on humans, the environment, and non-target species, but because they are designed to kill or otherwise adversely affect living organisms, pesticides may pose some risk. You are protecting your children and pets by hiring a licensed pest control company trained in the proper use, application, and disposal of pesticides. Normal contact with the dry surface should cause negligible exposure to the active ingredient. Err on the side of caution and wash your hands if you come into contact with the dry, treated surface.

Will heat harm my belongings?

Heat sensitive items may be damaged. Please refer to the checklist of items we recommend for removal before heat treatment. We are not responsible for damage to the structure, furnishings, or belongings subjected to heat treatment.

Do you offer heat-only bed bug treatment?

Yes. Heat-only treatment comes with a 30-day limited warranty.
